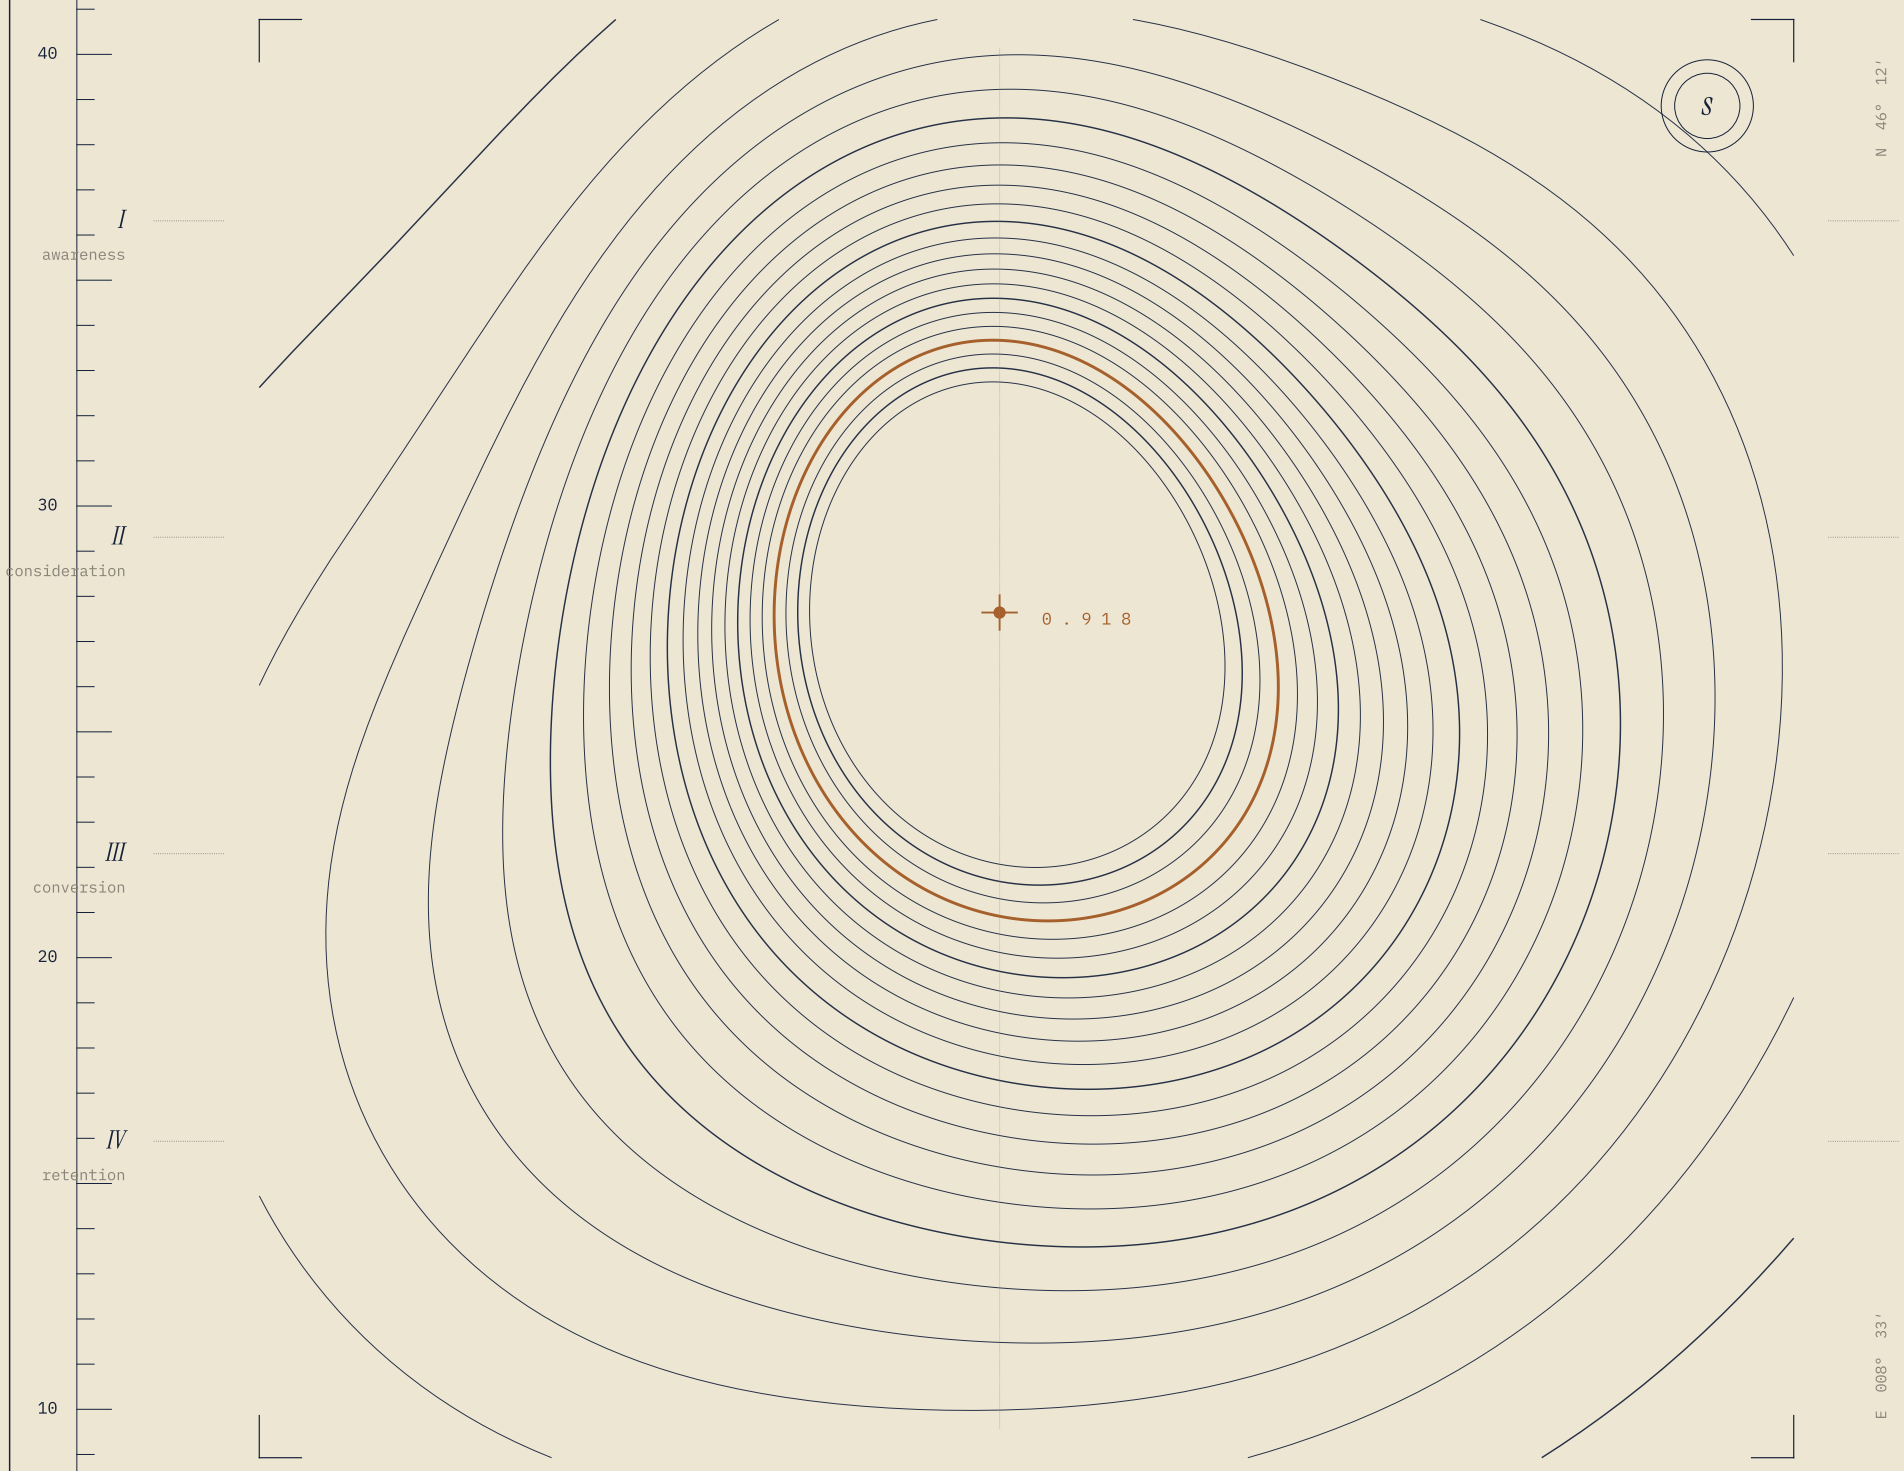
a study of conversion surfaces, in which the field is mapped by the quiet attention of the operator.

the quiet terrain of the operator



F I G . I *the conversion surface, plotted at twenty-two isometric intervals; accent ring marks the terminal yield contour.*

I N D E X O F U N I T S

Y	yield, per thousand	*R*	return on expenditure	*K*	cost, per acquisition
X	conversion coefficient	*M*	margin of efficiency	*A*	measured anomaly
